Overview

The new Demosphere mobile app is a one-stop tool for teams, parents, coaches, officials and administrators to stay on track during the season. Access teams, rosters, schedules and game assignments, households and orders, all while staying connected via messaging tools.

It is important to note the Demosphere app is permission-based. For users to access their teams via the app, organization admins need to turn on permissions for team members. Teams and related information can only be seen after downloading the app from app stores once admin permission has been granted.

Where to download the app

For Coaches

- Message parents and team members via push notification and/or email
- Access to a private team staff wall
- Access games, trainings, and events
- Navigate to events using Google Maps, Apple Maps or Waze
- Get notifications on schedule changes
- Create custom team events
- Track RSVP and attendance statuses
- Report scores
- View player and staff ID cards

- Allow staff to report scores
- Brand app with team colors and logo

The screenshot shows the 'Message' configuration screen in the Demosphere admin interface. At the top, there are checkboxes for 'Email' and 'Mobile App', both of which are checked. Below this, the 'Send Immediately' option is selected with a radio button, while 'Scheduled For' is unselected. The 'Date' field is set to '07/11/2023' and the 'Scheduled Time' is '10:31 AM'. A dropdown menu for the recipient is open, showing 'kris@demosphere...'. Below the message configuration, the 'Email' preview section shows a calendar icon for 'JUL 11', a 'Message Subject' field with 'Girls U14 Skills Training', and a 'SENDER' field with 'Kris Baker' and a profile picture. A rich text editor with various formatting icons is visible. The email body text reads: 'Registration is now OPEN for the Girls U14 skills training event. You can access registration from the Demosphere mobile app or via our website [here](#). Hope to see you there!'. A 'Mobile App' preview section at the bottom shows the same text as a push notification.
